

### Description

The nurse documents administration route for the IM inactivated influenza vaccine as 'intranasal':

- Is prevented from documenting "intranasal" for intramuscular inactivated influenza vaccine.

### Comments

This step covers data quality checking as an informative aspect of vaccine administration.

### Pre-condition

Order is placed for intramuscular inactivated influenza vaccine.

### Post-Condition

The intramuscular, inactivated influenza vaccination route has failed to be recorded as intranasal in the EMR.

### Test Objectives

**Record Vaccine Administration:** The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.

Sample of data quality checking for vaccine route.

### Evaluation Criteria

The EMR prevents the user from entering 'Intranasal' as a route for the intramuscular, inactivated influenza vaccine.
