

**Description**

Juana Mariela Gonzales is selected as the patient and her record is opened in the EMR.

**Comments**

No Comments

**Pre-condition**

Juana Mariela Gonzales Initial Data Load completed.

**Post-Condition**

Juana Mariela Gonzales is the active working patient in the EMR.

**Test Objectives**

**Select New Patient:** The system must allow a user to distinguish information about patients with similar names or identifying information in order to select the right patient from the providers' EHR or other clinical software. This information is crucial for identifying and selecting the correct patient. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar sounding names. In order to match patients with those already in the immunization registry, the EHR or other clinical software should have the ability to record the mother's maiden name, whether the patient was part of a multiple birth, and if so, the order of birth (when such information is available). The provider should be aware of how often the protection indicator information must be updated based on local rules.

**Evaluation Criteria**

Tester shall verify that the product can distinguish Juana Mariela Gonzales Morales from similar sounding names and her twin using all of the pediatric demographics:

|  |  |

#### Notes

Patient last name from the hospital returned by the IIS is Morales (the mother's maiden name). The patient last name in the EMR should be Gonzales. This test verifies that the EMR can match the returned record despite the different last name.
