

**Description**

Following the vaccination visit, the provider uses the EMR to produce an immunization report that can be accessed by the patient including all history (the report can be provided in various formats - e.g., print, send to patient portal, etc.) and the vaccine forecast.

**Comments**

No Comments

**Pre-condition**

Initial Data Load completed with demographic data, vaccination history, and clinical history. Historical Vaccination reconciled and loaded into the EMR. New vaccinations have been administered.

**Post-Condition**

The patient/parent has been provided access to a patient immunization history record.

**Test Objectives**

**Produce Standard Patient Immunization History Report:** The EHR or other clinical software system produces a report of a patient's immunization history that is appropriate for various entities, such as schools and day-care centers.

**Evaluation Criteria**

Evaluation criteria is defined within each test step.
