

### Description

Following the visit, the EHR transmits an Immunization report to the Immunization Registry using the VXU/Z22. This will result in multiple warnings from the IIS to assess the EHR ability to receive and display the warnings.

### Comments

The Report must include the newly administered vaccine recorded in the EHR. The report may include the information imported from the IIS.

### Pre-condition

The vaccines for the visit have been administered.

### Post-Condition

The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.

### Test Objectives

**Transmit Standard Patient Immunization History Report:** The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's newly administered or newly identified immunization history to public health immunization registries.

Set up to verify that the EHR is able to receive and display the multiple warning response from the IIS.

**Link Standard Codes to Immunization Data:** The EHR or other clinical software system links standard codes (i.e., LOINC for lab tests or evaluation tools, SNOMED CT for conditions or observations, NDC codes for current immunizations, CVX for historical immunizations, appropriate codes for administration site, route, method, etc.) to discrete data elements associated with an immunization.

Note: Testing for NDC codes, CVX for immunizations.

### Evaluation Criteria

The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.

### Notes

The protection indicator for Juana Maria is 'Yes'. If this setting restricts the EHR from transmitting to the IIS, then the protection indicator for Juana Maria may be modified to 'No' for the purpose of this transaction.

All NDC coded values are required to use the 11-Character format that includes dashes ('-').
